

Dear Barb,

I am so thankful for your treatment center. When we first took our son to his pediatrician for help with bed wetting he gave us a prescription for a nasal spray hormone to be given at night. We tried it for one month and there wasn't one dry night, so we stopped. I was discouraged with the help I was getting until I heard about Enuresis treatment on Channel 9 news.

Six months after our first call and my son has been dry for months. We threw out the unused Pull ups we had used for nights.

Now that my son has been through treatment he isn't as crabby, has shown improvement in school and just seems better adjusted.

Thanks again for this wonderful program.

Barb
