

Before going to the Bedwetting Treatment Center, I had been using medication for my bedwetting problems. While they worked at the time, my family and I knew the pills were not a long term solution. We came to the Bedwetting Treatment Center hoping to end my bedwetting problems permanently, and that's exactly what happened. While the process did take some getting used to, it was relatively straightforward and easy to follow. Working with Michael was great as well. He was very helpful at figuring out which methods would work best for me. Now, at 16, I no longer wet the bed, thanks to the Bedwetting Treatment Center!
